MOUNTAIN RESCUE COMMITTEE

ENGLAND AND WALES

INCIDENT REPORT 1991

1991 again shows increases of both reported incidents and of fatalities on our hills and moorland:-

<u>Summary</u>	1991	1990	Average over last 10 years
Incidents	687	675	493
Fatalities	65	47	50
Injured	465	462	377

The increase of fatalities of rock/ice snow climbing is the worrying feature of the 1991 figures, there has been two fatalities and five accidents causing injuries whilst "scrambling" which are included in the rock/ice climbing numbers. Most of the scrambling accidents have occurred to solo and often un-helmeted scramblers obviously preventative and educational action is indicated, as also is action to reduce the fatalities and injuries to our rock/ice climbers.

It is also essential to still bear in mind the fact that well over 50% of fatal incidents are of the "non-mountain" type (39 in 1991).

The dramatic increase over the years of the involvement of our English and Welsh teams on "non-mountain" incidents appears to be related to the following:

- a) Teams are being requested and are of course responding to calls for assistance by the Police, Social Services etc to give help with their specialised transport when bad weather conditions prevent Ambulances etc reaching outlying areas to deal with emergencies, to assist on localised searches in built up areas for aged wanderers from hospitals etc, or for missing children - of the latter, most tragically, two requests from the Police to aid in the search for missing children resulted in the two children being found murdered.
- b) Teams are also being called out more frequently on false alarms - mostly with good intent. This increases the number of recorded team call outs.
- c) The increasing numbers of mountain bikes, para/hang gliders, motorcycle scramblers on our fells and moors have also contributed their accident figures to our totals. To date no fatalities have been reported.

Injuries:-

The number of injured casualties has increased by about 33% over the past 10 years. One of the reasons put forward for this increase in team involvement has been that in the past people suffering minor injuries either got themselves, or were helped by passers-by, down for medical help - today with the increased, coverage and effectiveness of teams they are being involved more readily and in some cases by their attention have prevented serious medical complications.
